WHO IS **IN THE ROOM**

Write the names in before the meeting. For each person: what they worry about, the one sentence to say, what to show, and the question they are likely to ask.

WHO	NAME	CARES ABOUT	SAY	SHOW	THEY MAY ASK, AND THE ANSWER
Head of Member Care	_____	The month closed on time, no surprises, no escalations about money.	**"Nothing goes out until the checks are decided, and every bonus explains itself."**	Review › Checks, then How this was counted for one agent.	Who answers if a number is wrong? The senior manager finalizes, and every change is logged with a name and a time.
Senior manager	_____	Control of the rules and the final say.	**"You keep the rules, and nothing is final until you finalize it."**	The month close on the Supervisors page; the scorecards in Settings.	Can I change a rule? Yes; the change is logged and the month counts with it.
WFM manager	_____	The emails right and on time; the analytics.	**"The emails are written and checked in the tool; you send them from Outlook."**	Emails: deduction, absences, incentive, and the four daily brand emails.	Does it send by itself? Never. It prepares drafts; people send.
WFM analysts	_____	Less copy and paste, fewer late nights at month end.	**"One drop for the whole month; each file is recognised by what is inside it."**	Import with the live drop pack (06).	What if a file is new? It is read by its columns, not its name; anything unclear is asked about.
Supervisors	_____	Less time on attendance; one-to-ones that are quick to prepare.	**"Exceptions only: late, absent, leave and days off. Every other day counts as worked."**	View as a supervisor: their own team; the one-to-one on one page.	Do we fill a sheet every day? No: one template a month, exceptions only.
Quality team	_____	Scores entered once and used everywhere.	**"The Final EVAL goes in once and feeds every scorecard that needs it."**	The Quality page, every name matched.	And DRC-CSAT? One number for the month, typed once.
HR	_____	Privacy, fairness and records.	**"No National IDs in attachments; each person sees only what their role allows; every change logged."**	View as an agent: their own page only, the ID hidden.	Where is the data? In MC Data, encrypted; no web service.
IT and security	_____	Installs, network, where the data lives, who can read it.	**"Nothing to install, no server, no network calls; the shared files are encrypted."**	The IT and security note (11).	Who can read the files? Only accounts made in the tool (AES-256).
Finance or payroll	_____	Amounts that are right and can be traced.	**"Every amount has its working: each KPI, band, ranking, point and day."**	How this was counted; Results › Reconcile against any workbook.	Can we audit a month? Yes: the final month is locked and its log kept.

Seat yourself where you see the screen and the faces. When someone frowns, ask what worries them: the answer is usually on this page.
