MEETING-ROOM **CHECKLIST**

Ten minutes in the room the day before saves the meeting. Tick each line on the computer you will present from.

THE DAY BEFORE

- [ ] Copy the kit to the desktop: the deck, the **demo file** and the **backup video** (and the live drop pack, as a spare). Nothing in the kit holds real data.
- [ ] Open the demo file in Edge or Chrome: it opens on the dashboard with no folder and no sign-in. **F5 starts it afresh**, so try anything.
- [ ] Press F11 for full screen and look at it on the projector. Ctrl + 0 puts the browser zoom back to 100%.
- [ ] Keep **Light** (the demo opens light): dark pages look grey on most projectors.
- [ ] Try the keys once: S spotlight, Z zoom, + − size, Esc off. In the Showcase: Present, → ←, N notes, Esc.
- [ ] Play the backup video for five seconds on that computer.
- [ ] If you will show the real tool too: open it from the common folder, sign in as admin, open the Showcase. If the room's computer cannot reach MC Data, use the demo file only.
- [ ] Charger, the HDMI or USB-C adapter, and a clicker (the arrow keys work in the deck and in Present).

30 MINUTES BEFORE

- [ ] Turn on **Do not disturb** in Windows and in Teams; close Outlook so no reminder pops up on the screen.
- [ ] Close the other browser tabs and hide the bookmarks bar (Ctrl + Shift + B).
- [ ] Open, in this order: the deck on slide 1, the demo file on the dashboard, the video paused at the start.
- [ ] Alt + Tab moves between the deck and the browser: try it once.
- [ ] With two screens, PowerPoint's Presenter view shows you the speaker notes.

5 MINUTES BEFORE

- [ ] The deck in Slide Show from slide 1 (F5). B blacks the screen when you want the room's eyes.
- [ ] Your phone on silent.
- [ ] Your first sentence: **"Member Care's month, in one place."**

WHEN SOMETHING GOES WRONG

Nothing on the projector	Win + P, then Duplicate.
The real tool waits on MC Data	Switch to the demo file: it needs no folder.
The browser asks about a folder	Choose Allow (a box at the top, or an icon in the address bar).
A page is too small to read	Z zooms where you point; Ctrl + + enlarges the page.
Anything else	Play the backup video and talk over it. Keep going.
