HARD **QUESTIONS**

Twenty-two questions managers ask, each with a short answer that is true today. Read the answer, then stop talking.

ACCURACY

How do we know the numbers are right?
Every counting rule runs over 10,000 made-up people with known results before any change ships. Results › Reconcile lines the tool up against any workbook, such as last month's final result, and gives the reason for each difference.

Where do the KPIs come from?
The tool works them out itself: adherence, AHT, days under target and tardiness from the Genesys exports and the attendance; Quality Observations, FCR and Empowerment from the quality team's Final EVAL; DRC-CSAT is one number for the month; the month's figures, such as Service Level, are typed once. No KPI file is needed.

Why does 94.96% count as 95%?
Percent KPIs are rounded to a whole percent before they are ranked, the same for everyone. It is a setting, and How this was counted shows it for every person.

What if a number is wrong after the emails went out?
The checks run before anything is built, so most mistakes never reach an email. After that, the deduction email page takes corrections into the month's attendance, the month is built again, and every change is logged with a name and a time.

Who decides the rules?
The senior manager: the scorecards, the bases and who is eligible. Every change is logged, and a month is final only when the senior manager finalizes it.

PRIVACY AND SECURITY

Where is the data kept?
In the MC Data folder in the common folder, as encrypted files, one per record. Nothing goes to the internet: opened as a file, the page tells the browser to refuse every web address.

CONTINUITY

What if the file is deleted or breaks?
The tool is one HTML file and the data is separate, in MC Data. Put a copy of the file back and everything is there. Backups (.mcbak) are locked with their own password.

What if the WFM analyst is on leave?
Vacation cover is built in: the WFM manager can take over the analyst's steps.

What if the person who built it leaves?
Its source, its tests and a written guide to every part are kept together, and every change is tested in a browser before it ships.

Does it need a server or IT to run?
No server and nothing to install: Edge or Chrome opens it from the common folder.

ACCESS AND IT

Can we use it on phones?
Not yet: phones cannot open the shared folder. The plan: MC Data in SharePoint so every laptop opens it from anywhere, then a Microsoft 365 connection for phones.

Can we use it from home?
Yes, on a laptop that reaches MC Data. With MC Data in SharePoint and synced by OneDrive, from anywhere, with no VPN.

What does IT need to do?
Nothing to install. If a company setting stops the browser opening folders, IT allows it for this file. Keep the HTML read-only for everyone but its owner.

Can it connect to Genesys directly?
Not today, and on purpose: it makes no network calls. The four exports are dropped in once a month, which takes a minute.

Who can read it?

Only accounts made in the tool, and each person sees only what their role allows: an agent only their own page, a supervisor only their team. Each agent's records are locked with that agent's own key.

What if someone copies the folder?

They get encrypted files (AES-256). Without a tool account they cannot read them; the account files hold only scrambled passwords and locked keys.

Do National IDs leave the tool?

Not in emails: the incentive and deduction attachments have no ID column. On screen, IDs are hidden when the admin shows another role's page.

Was it reviewed for security?

Yes: a security review of the whole tool, every finding fixed and covered by tests. Passwords use PBKDF2 with 600,000 rounds; records use AES-GCM-256.

EFFORT AND ROLLOUT

How long to start?

One month close: the HTML next to MC Data, an account for each person, and the admin gives the roles.

How much training?

Each page has How to use. We plan fifteen minutes per role.

What does it cost?

Nothing to buy or install: it runs in the browser people already have.

What changes for supervisors?

Attendance: only the exceptions (late, absent, leave, days off). One-to-ones are filled from the numbers on one page, and objections are answered in the tool.

When you do not know: "Good question. I will check and send the answer with the follow-up email." Then write it down where they can see you do it.
